| Data | Source | Date | Notes |
| Road Centers, Aerial Photo | S&A T&E | 2009 | |
| Streams and Waterbodies | S&A T&E | 2003 | |
| City Boundary | State of Conn. DEP | 1981 | Some updates based on City of Torrington Logging Data |
| Wetland Soils from Soils for Newfield Connecticut | USDA, Natural Resources Conservation Service and Connecticut DEP, EGIC | 2004 | This is a 1:25000-scale data layer representing the quadrangles in the Newfield Connecticut that reflect the legal definition of wetland soils in Connecticut. The Wetland Soils data layer is a special classification of soil map units in the National Wetland Inventory (NWI) which includes a data field called "Clear" that is used to classify and identify wetland soils. These particular soil polygons are classified as either Alluvial and Floodplain Soils, Nonwetland Soils, Poorly Drained and Very Poorly Drained Soils, Very Poorly Drained Soils, and Water".
